**CARE GUIDE FOR
YOUR NEW
WINDOWS**

➤ **Glass Cleaning**

- Glass used in most double-glazed units is easily scratched and it is, therefore recommended that hand jewellery is removed prior to cleaning.
- Any proprietary household glass cleaner may be used with a soft cloth and it is recommended that heavy external grime be initially removed with a solution of soap and water.
- Laminated glass or glass containing Georgian bars is cleaned in exactly the same manner.

Glass cleaner is available to buy from our showroom

➤ **Leaded Glass Cleaning**

- In this type of double-glazing, lead strips are bonded to the outside and inside of the external pane of glass.

- Take care when cleaning leaded lights as excessive pressure might dislodge the lead from the glass surface.

- The use of warm soapy water and a soft cloth, moderately applied will provide an adequate cleaning method.

- **Scratched Glass**

- If scratches occur, most can be removed with jewellers rouge or an equivalent rubbing compound

- **PVC-U Frame Cleaning**

- Wash frames with a soap and water solution periodically (we recommend every 6 months) to remove any grime and atmospheric deposits.

- If required clean with UPVC solvent cleaner – this is available to buy from our showroom

- Take care not to disturb sealants.
